Patient Record Storage

DATUM[®]
storage solutions

The Client

Berks Eye Physicians and Surgeons LTD had recently undergone construction, and took that as an opportunity to analyze their current patient record area.

They decided that they could improve and consolidate their record and eye chart filing system to make it more easily accessible and user friendly.

Storage Solution

In order to make the most of the available space, a MobileTrak5® system with 4Post™ shelving was installed.

Since the filing area was visible from the front of the office, the aesthetic appeal of the system was important. Recessed track was chosen, and the existing carpet in the area was continued onto the decking and under the MobileTrak5®, creating a seamless look.

The 4Post™ shelves were equipped with pull out posting shelves, which provided the employees with temporary work spaces while accessing the system.

The system provide room for growth and the organization that the office required.
