storage solutions

The Client

Dallastown Area School District had recently constructed a new intermediate school, and was in search of a sensible, simple bulk storage solution for their storage rooms.

The rooms were in different wings of the school and could house anything from paper and art supplies to extra textbooks, cleaning supplies, and other bulk storage items.

The shelving needed to be durable and easy to access, and the school also expressed an interest in color coordinating with the school's wing color differentiation.

Storage Solution

The ideal option for their bulk storage needs was to provide them with 4Post™ shelving, because it is durable, easy to assemble, and open to provide easy access to stored goods.

To meet the desires of color coordination, each shelving system was painted to match the color denoted to the wing it was in. This gave each system a unique personality, and a fun but functional look that suited the school's specifications.
