storage solutions

## The Client

A department for the Commonwealth of Massachusetts was relocating to a new facility and was in need of a storage solution for their records.

The space they were allotted didn't allow for their current vertical filing cabinet systems, so they needed a solution that would maximize their capacity without taking up more space than they had available.

## Storage Solution

To store the file folders of several different departments in one area, three different MobileTrak5® Hybrid systems were installed in three different areas of the new building.

TambourDoors installed on the shelves worked in conjunction with back panels on some of the systems to provide security for the stored documents.

All three systems were equipped with mechanical safety sweeps to provide a safe work environment.

The new system gave them the security they needed and room for future growth.
