storage solutions

## The Client

A newly constructed maintenance building, meant to house golf carts and the golf clubs and bags of members, prompted an assessment of available storage solutions for the Ligonier Country Club.

Traditional stationary shelving was first thought of, but then it was decided, with the number of members increasing, that something a bit more flexible and condensed would be needed.

A solution that would take up only a bit of floor space in the new maintenance building, would fit within the constraints of their budget, and would organize the members' golf bags for easy retrieval was desired.

## Storage Solution

In order to adequately house the bulky golf bags, a MobileTrak5® with 4Post™ shelving was installed. The manual system allows members to easily slide a carriage over to access the aisle where their clubs are stored.

The heavy duty 4Post™ shelving provides durable storage for the heavy golf bags and makes for a more organized and easier to access system.

Should the club decide to remodel again or add storage areas elsewhere, the entire system can be relocated. The groutless track system can also be easily expanded to make room for future growth when the club adds more members.

“We recently built a brand new maintenance building to house the golf carts, as well as members' golf clubs. Originally, we were going to store the clubs on traditional stationary shelving, but then we learned how Datum's MobileTrak5® can reduce the amount of floor space needed for storage. The movable shelving system reduced the overall size of the building and the savings in construction not only paid for the system, it paid for a few new golf carts.”
