storage solutions

## The Client

Pape-Dawson Engineers had an all-too-familiar dilemma: how do we secure delicate and costly measuring equipment and still keep it easily accessible?

The San Antonio firm was using open shelving to store high-precision and temperature-sensitive equipment as well as different measuring devices. There was nowhere to hide the various wires and the cluttered shelves presented an unprofessional look to the space. More importantly, the unsecured shelving was in a high-traffic, public area which led to valuable technology and equipment going missing on daily basis.

## Storage Solution

Datum Storage Solutions worked with the client to create a personal equipment storage locker to house and secure their delicate instruments as well as personal items.

Each of Pape-Dawson's twenty six lockers incorporates 4Post™ shelving with ventilated doors and ceilings along with a key pad to ensure the protection and care of the items stored inside.

Datum's personal storage lockers gave the unassuming space the professional look it needed while virtually eliminating the problem of missing or lost equipment.
