storage solutions

The Client

When the Phoenixville Area School District Administration Office was moving to a new location, they found that their storage area for student records and other district documents was much smaller than their previous storage space.

This presented a problem. They needed a more efficient storage system to house their current files and be able to accommodate future growth, but would still fit in the small space they were allotted for storage.

Storage Solution

A MobileTrak5® system with 4Post™ shelving was installed to provide ample room for their current storage needs.

The system was built open-ended, which allowed for future growth with the simple addition of track, decking, and carriages.

The new system fit perfectly within the small storage room, leaving plenty of space for future expansion. The MobileTrak5® greatly improved the organization of the file room and stored material and improved the office's productivity in handling archived records.
