Customer Sample Storage

storage solutions

## The Client

In an attempt to clean up their warehouse, organizing their inventory and making space for new equipment, School Datebooks was looking for a more efficient storage system for their numerous customer samples.

Their current system of approximately 40 standard four-drawer lateral files and 2,000 square feet of industrial shelving was taking up too much room. A custom storage system was an ideal way to address their needs.

## Storage Solution

A MobileTrak3® was installed to house more than 70,000 customer sample files that School Datebooks archives in their warehouse.

The new system consolidated and better organized their large amount of samples by moving the system into the office area. This also made accessing the file faster and more convenient for the staff.

The space that was freed up by the new high density system was used for new machinery, thus eliminating the need to build a larger warehouse. As School Datebooks continues to grow, they can easily add onto or relocate their storage system to a new area or facility because of the unique adjustable rail and decking system.

“After investigating solutions to store the information in a more concise and useful fashion, we found Datum’s MobileTrak3® storage system to be the best fit for our needs. Datum was very helpful in giving us multiple solutions up-front, changing the designs to our requests and installing a final solution on-time. Thanks Datum! You guys were great!”
