The Client

The Souderton Area High School's Athletic Department decided that it needed a better way to store and organize their sports teams' uniforms and equipment in their newly constructed high school.

Previously, these items were stored in opaque bins and cardboard boxes in several different rooms that were scattered through the school. This made it difficult to inventory stored items and shortened the lifespan of their uniforms and equipment due to improper storage and lack of airflow.

Storage Solution

A low profile MobileTrak3® system with 4Post™ shelving was chosen to help organize and consolidate the athletic equipment storage in one location.

The many accessories for 4Post™ made it ideal for this application, as heavy duty shelves, ball storage racks, garment rods and specially designed golf bag racks were used to separate and organize the equipment.

Hanging the uniforms and getting rid of poorly marked boxes for other supplies allowed for optimal airflow and organization, equipment remained dry preventing mold and bacteria from ruining them.

To promote team spirit, custom paint and laminate was used to coordinate the system. The extra room the system provided in the storage area could now be used for uniform and equipment distribution among the athletes.

“Datum’s MobileTrak® System has been a wonderful addition to our equipment storage. Having everything in one location, being able to separate things into different storage units, and being able to locate all the different sporting teams’ equipment in a very quick manner has been very helpful to us.”
