Stak-N-Lok[™]
Stackable, Modular Filing System

Stak-N-Lok™

Stackable, lockable storage

Stak-N-Lok™ from Datum Storage Solutions is a versatile storage solution with shelving for files, books, office products, medical records, and more. From a single-tier desktop unit to a seven-tier stacked unit, you have the option to add or remove tiers as your storage needs change. For applications where security is a concern, Stak-N-Lok can be

equipped with dual-point, gang-locking doors that lock all tiers simultaneously. The modular design of Stak-N-Lok allows you to configure storage to meet your specific needs, and units are compatible with Datum's TrakSlider™ and MobileTrak® high-density storage systems.

**Security**

Gang-locking system allows you to lock all doors simultaneously with a single key, and dual-point locking provides additional security.

**Increase Storage Capacity**

Easily installs into TrakSlider™ system with no additional drilling for anti-tip mechanism.

**Organize Files**

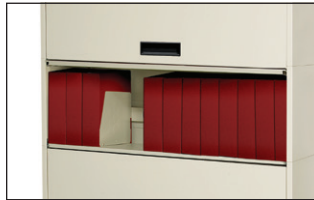

Adjustable file dividers keep stored items organized.

**Easy Retrieval**

Fully-retractable, flip-up doors include sure grip handles for quick, easy access to stored items.

**Convenient Workspace**

Optional posting shelf provides a convenient, temporary workstation that retracts into the unit when not in use.

**Generous Cabinet Depth**

Roomy inner cabinet space offers more storing and filing options.

EXPANDABLE

For even greater capacity, you can combine Stak-N-Lok™ with a Datum TrakSlider™ or MobileTrak® system, which are ideal solutions for high-density storage in a small amount of space.

TrakSlider can more than double your storage capacity by converting stationary storage units into movable storage units. The unique design reduces retrieval time and increases accessibility, making it a popular choice for active storage areas.

MobileTrak high-density mobile storage reduces the number of access aisles to one by attaching storage shelves to heavy-duty rolling carriages. This type of high-density storage is ideal for archival storage or for any area that has a high quantity of stored items and a small amount of space.

TrakSlider™

MobileTrak®

ELIMINATE TIP AND TRIP HAZARDS

Traditional four-drawer lateral files only allow one drawer to be open at a time, and the drawer opens out into the workspace, creating both a trip hazard and a tip hazard. With Stak-N-Lok™ you can eliminate tripping and tipping because the retractable doors flip up and stow out of the way while shelf contents remain inside the framework of the unit. This design allows all storage compartments to be open at once without obstructing movement in and around the unit.

VERSATILE**Maximizes floor space**

Stak-N-Lok™ is available in single-tier units that fit conveniently on desktops and under windows. Stacked, multi-tier configurations maximize space with more vertical storage that occupies minimal floor space.

**Easily expands**

Stak-N-Lok™ units are made of modular, stackable tiers that can be added or removed to suit your storage needs. Tiers can be stacked up to seven high.

Matches any décor

Stak-N-Lok™ units are available in a variety of colors and laminates to compliment any environment.

**DURABLE**

Stak-N-Lok™ is constructed of heavy-duty steel and includes a durable, textured, powder-coated finish that resists scratching and marking and cleans up easily. Welded steel channels in each door and shelf provide additional strength, and each unit is backed by Datum's Lifetime Warranty plus a two-year labor warranty.

CONFIGURATIONS**100 Series**

- Optional top lock
- From 1 to 7 units high
- Tier widths (in.): 24, 30, 36, 42

200 Series

- Posting shelf for convenient pull-out workstation
- Posting shelf and lock located above third tier for easy access
