

Women & Infants Hospital

Providence, Rhode Island

Medical Record Storage

DATUM[®]
storage solutions

The Client

The Women & Infants Hospital was relocating to a new building and was searching for a new filing system for their patient records.

Their old mobile high density system wasn't going to fit into the new area that was allotted for patient records, and it didn't match the new decor.

The hospital was looking for a new way to efficiently store their growing amount of patient records in a high density system that would fit the space they had.

Storage Solution

Due to the low ceiling, the hospital needed a low profile high density shelving solution. To accommodate this, Datum installed a MobileTrak3® system equipped with ThinStak® shelving.

The lower profile of the MobileTrak3® combined with the low profile ThinStak® shelving created a system that would fit in the height restrictions better than their previous system.

The combination of the two low profile systems gave them the storage capacity they needed while staying within the height requirements for ceiling clearance. They also saved valuable floor space and a custom laminate was chosen to match the surrounding decor.
